Education

Toronto Metropolitan University **Sep. 2023 – Present**

BSc, Computer Science, Co-op — Dean's List *Toronto, ON*

Experience

Ontario Government — GovTechON **May 2026 – Present**

Software Engineer *Toronto, ON*

- Developed **Go microservices and REST APIs**, modernizing legacy systems and **AWS object storage integrations**.
- Optimized **caching and concurrency**; improved **asynchronous processing and background-job scheduling**.
- Strengthened **authentication, authorization, and data integrity** with validation, migrations, and audit logging.
- Delivered **accessible full-stack features** through **automated testing**, peer review, root-cause debugging, and containerized delivery.

VironixAI **Sep. 2025 – Present**

Technical Co-Founder / Founding Software Engineer *Toronto, ON*

- Co-architected an **AI SaaS platform** spanning **full-stack development**, secure REST APIs, and service integrations.
- Engineered **asynchronous processing and transactional billing** with usage metering, retries, and **failure recovery**.
- Operated **cloud infrastructure and CI/CD** across deployments, migrations, security, and production debugging.
- Led **engineering operations**: hiring, code review, developer payouts, product prioritization, and cost planning.

Freelance Software Engineer **Sep. 2023 – Present**

Independent / Paid Client Engagements *Toronto, ON*

- **Client Acquisition — 3 Companies:** Built and deployed **production client-intake systems** for Interior Design R, Little Genius Island, and JTC Property Services, helping companies turn site visits into **paying customers** through enrollment, scheduling, and quote workflows.
- **AI Real Estate Data Classification Pipeline:** Built a **Python/Selenium tool** using **AI APIs** to screen listings against client criteria. Stored results across runs, avoided duplicates, and highlighted new matches, saving clients **hundreds of hours of manual search**.
- **Course Availability Monitoring & Notification System:** Developed a **Python/Selenium tool** with saved login sessions and configurable polling; integrated a **telephony API** for SMS alerts when seats opened, helping clients **successfully enroll in high-demand courses**.

Projects & Leadership

Connect OPS — Developed an employee social networking and management prototype; **OGT Hackathon Award Winner**.

GetMyPortfolio — Built a React/TypeScript system for clients to request custom portfolios I design and develop.

Digital Duel — Built C/SDL2 and browser versions with **custom movement and projectile physics**.

Robotic Arm Control UI — Linked a 50 Hz Python controller to six live browser gauges via WebSockets.

Toronto Autonomous Systems Collective — Developed and maintained the team's React/TypeScript website.

Under The Tree — Founded a winter outreach initiative, raising **$1,000+** to distribute meals, clothing, and blankets.

Technical Skills

Languages: Bash, C, CSS, Go, HTML, JavaScript, PHP, Python, SQL, TypeScript
Runtimes, Frameworks & Libraries: AWS SDK for Go (S3), chi, Express, Node.js, Nuxt, React, Vue
Databases & Caches: Firestore, MariaDB, MySQL, Redis
Cloud Infrastructure: Google Cloud (Cloud Run, Cloud Storage, Secret Manager)
Development & Automation Tools: Docker, Git, GitHub Actions, Selenium
Service APIs: Firebase Authentication, OpenAI API, Stripe, Twilio
Content Management Systems: WordPress
